

INDUSTRIAL AND LIGHTWEIGHT HALLS

www.multi-purpose-space.com

OUR EXPERTISE. YOUR SUCCESS.

RÖDER® Industrial and lightweight halls - fast and flexible space. For long or short time frames!

We are a leader in the production, sale and rental of tent systems worldwide. Our customer orientated service and knowledge allow our products to reach the highest level of quality and continuous implementation of technical advances.

Do you have a long or short term need for storage or production space or do you need extra space for your exhibition or retail needs?

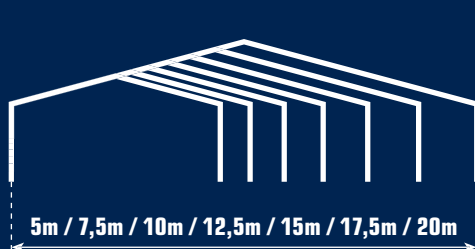

RÖDER® Industrial and lightweight buildings are fast, clean and economically assembled and disassembled for any individual purpose and time frame at any location. Low start-up costs speak for themselves: The simple use of earth anchors or shield anchors, heavy duty anchors, spot or strip foundations are sufficient for our structures. Since foundations are not required, installation or relocation can be performed quickly and at any time. It is also possible to extend or reduce the length as your requirements evolve.

The structures consist of aluminium profiles with steel galvanised parts. The building can be clad with high quality PVC walls, single skin steel sheeting or insulated sandwich panels. The roof and gables can be single skin high quality PVC or ISO inflatable thermo-insulated double PVC skins. If required, they can also be combined with window inserts.

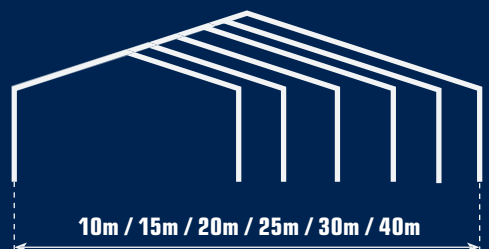

Several finance options are available, including rent, rent to buy, lease, or purchase.

Industrial- and lightweight hall systems by RÖDER®

RÖDER® S75-Alu in the spans from 5m to 20m and side heights of 3,50m, 4,40m and 5 m.

RÖDER® H-Line in the spans from 10m to 40m. Side heights 4,20m, 5,20m, 6,20m and 7,20m

Short term space requirements? At favorable rates!

Whether storage, maintenance halls or even supermarkets - your space problems will be solved by us in a very short time. The well proven design and high quality materials of our industrial structures make them particularly resistant and durable. They offer an economical alternative to a permanent construction project.

Whether you need great visibility into your showrooms or access to your structures by car or truck - almost every desire can be achieved without problems. Vehicle access for example, is easy with 5m wide bays and up to 7m high sections.

The extensive RÖDER® interior program includes heating, air conditioning and lighting. We can also offer a range of door options, from sliding doors, roller shutters and personnel doors. If required, windows can also be fitted.

Connecting two or more structures can lead to a large and flexible space. The connection is achieved with the installation of a rain gutter between the structures. If required, it can be heated in the winter to reduce snow build up.

Our ingenious automatically controlled thermo-roof system with double-walled, air filled roof and gable covering provides an excellent climate, saves heating costs, prevents condensation, improves the snow load values and allows you to work in daylight. Tests to determine the efficiency of our insulating wall and roof structures showed a reduction in energy consumption by 54%.
